

Hazzard near Langstone Entrance

On 14 July Wayzgoose Sealine 42/5 heading west hit an underwater obstruction that sheered the 1 3/4in shaft and taking the propeller to the bottom.
 On 26 July Juno Sealine 37 heading east hit an underwater obstruction sheering the shaft bolts and moving the shaft and propeller back onto the rudder.
 Both boats were on course between Chichester and Horse Sand Fort. Juno may have drifted south to the marked recovery position. So **XX** is a guess at the position of whatever lies below the surface and should be avoided.
